

EuCon Adapter for Cubase 6

New functions compared with Cubase 5.0

1. Full 64-bit support for Mac and PC

2. VST instrument control

- * Direct access to VST instruments loaded into the Synth/Instrument channels
- * Switching VST instruments through the config-mode (Instrument channels only)
- * Plug-in window pops up or closes upon Knobset focus or un-focus. (similar to Dyn)

3. Quick Control support

- * Direct access to the channel's quick control feature

4. New Surround Panner support

- * Specific to the new Surround Panner:
 - Speaker solo – upper switch
 - Joystick Mode Switch (2nd top-most on the first page of the panner knob set)
 - Joystick Control Modes:
 - * Mode I – Signal Center Position (Left J) and Signal Rotation (Right J)
 - * Mode II – Front Left Position (Left J) and Front Right Position (Right J)
 - Rotation knobs (Rotate Signal and Orbit Center) without boundary (unlimited)
- * Support for all main surround panners
- * Speaker enables (on the last page of the panner knobset) are laid out dynamically according to the “most current” channel (output) format (e.g. 5.1)
- * Config-page for switching between different surround panners
- * Except for Joystick features, all mentioned features also apply to the underlying surround panners of the Aux-send slots

5. Stereo Panner

- * Config-page for switching between different stereo panners

6. New wheel modes

- * Vertical event move (e.g. shifts selected events across different channels)
- * Track Select

7. Channel EQ

- * Gain inverse parameter is available at the lower switch of all EQ frequency knobs

8. Input knob set

- * Phase and Trim/Gain for both Instrument and Synth channels are now available
- * MIDI input selector for Instrument channels (similar to MIDI channel selector)

9. EuCon device setup

- * Independent Synth/Instrument channel filter options (previously regarded simply as Instrument channel type)
